Leadership

How can CDP help?

CDP Reporter Services helps your company build expertise in carbon and water reporting and management. Understanding best practices in these areas leads to efficiency improvements and innovations that reduce costs and improve your performance, supporting the business case for investing in sustainability.

Reporter Services membership provides your company with tailored **support, enhanced data access and thought leadership insights** on reporting and managing climate and water risk. You will gain access to the tools you need to look beyond reporting at how to integrate carbon, energy and water management into a wider business strategy.

Membership options are available through CDP's climate change and water programs, enabling you to benchmark your performance against peers and identify material risks and opportunities with the world's largest source of primary climate change and water data.

Using the resources and tools that membership provides, your company will be able to:

- ▼ **Build accountability** with your investors and other stakeholders through greater transparency and company-specific reporting;
- ▼ **Take action** to reduce your emissions, enhance your water stewardship and strengthen your sustainability practices; and
- ▼ **Accelerate leadership** on your management of climate and water risk through better understanding of best practice.

What does membership give you?

Dedicated support

You will benefit from personal account management by a CDP expert on climate change and water reporting. This includes a gap analysis and final review before submission, to ensure your response is 'investor ready' with clear and company-specific information that is aligned with CDP's technical guidance.

The value of CDP data

CDP data, combined with our powerful analytics tool and our new benchmark report enable peer to peer comparison and understanding of best practices related to carbon and water management. Using CDP data informs your approach to sustainability and leads to reduced costs, greater innovation and enhanced environmental and financial performance.

Using CDP analytics, companies can bring CDP data to life through easily exportable charts and reports. Data can be filtered by a range of categories, including company, industry, and country, enabling you to build a business case for investments in sustainability.

CDP's analytics tool has transformed how we use data to benchmark our risks, opportunities, and emissions reduction targets against sector peers. It provides us with detailed, valuable information through just a few clicks.

Corporation**

Enhanced data access

You will gain unlimited access to CDP data in user-friendly formats, and to an analytics tool that helps you benchmark your performance against peers and easily identify trends and best practices.

CDP's Reporter Services Forests pilot

CDP's Reporter Services Forests pilot helps companies build internal expertise on forest risk management and forests reporting.

Deforestation is a real business risk and is increasingly capturing the attention of investors and companies as a material business concern. Through our forests pilot, CDP will provide you with the tailored support and guidance you need to more effectively report to your stakeholders and address deforestation risk.

The membership includes:

- ▼ A personal account manager will support you throughout the forests reporting process;
- ▼ Your company will benefit from unlimited access to CDP forests data and analytics; and
- ▼ You will be invited to participate in regular forests-focused leadership discussion groups.

Networking and insights

You will be invited to join exclusive events and webinars on a broad spectrum of sustainability-related issues, and will often have first notice of new CDP initiatives and offerings.
